Trio Systems Launches SoniClear MeetingPro 3.0 & RecorderPro 3.0 at Government Business & Education Tech 2003

Pasadena, CA – October 1, 2003 – Trio Systems LLC, a leading provider of web development tools and software development components, today announced the official launch of its SoniClear MeetingPro 3.0 and RecorderPro 3.0 digital recording technology at the Government, Business & Education Tech (GBET) 2003 event in Los Angeles, CA.

“While retail sales of audio recording equipment is expected to exceed \$1 billion annually and medical transcription spending is at \$22.3 billion a year, the industry remains focused on outdated recording systems,” said Alan Bartholomew, president of Trio Systems. “At the forefront of digital recording technology, Trio Systems integrates improvements in PCs and laptops with software that allows small businesses, local governments, education and retail channels to create custom solutions to meet their specific application needs.”

SoniClear MeetingPro 3.0

Superior to conventional recording methods, MeetingPro 3.0 allows users to create digital recordings of meetings, lectures, presentations and class lectures that are easily accessible. With built-in VoiceBoost Signal Enhancement professional-quality recording technology, every word is captured for easy transcription, duplication and play back.

Additional key features include:

- Note taking feature to allow users to locate important points within recordings with ease
- Assist in the transcription of meetings into a written record
- Archive in MP3 format for easy posting to CD-ROM, LANs, e-mail or the Internet

“MeetingPro provided an excellent way for our Burglar Alarm Taskforce to use the Internet to keep citizens informed about these important meetings,” said Clifford Eng, Assistant General Manager of the Information Technology Agency at the City of Los Angeles.

“MeetingPro has made it much easier to produce accurate minutes of discussions from our City Council Meetings,” said Marjorie Walston, clerk at the City of La Canada Flintridge, CA.

-more-

SoniClear RecorderPro 3.0

RecorderPro 3.0 is a digital recording system for capturing dictation, meetings, presentations and tutorials with professional-sound quality, unlike conventional audio recorders. This Windows-based software can be retrieved on any computer over LANs or posted to a Web site. Its recording program allows users to incorporate sound into PowerPoint presentations.

Additional key features include:

- The undo feature allows users to remove mistakes made during recording
- Records notes into a dictation file to remember important ideas for future reference
- Uninterrupted and unlimited recording length

Trio Systems will also be launching the new Beta version of MeetingPro 4.0 that includes Webcasting. This enhanced feature allows users to publish recordings with notes to Web sites, LANs or CD-ROM while not requiring the listener to have SoniClear. MeetingPro 4.0 will also have foot pedal support for transcribing meetings like conventional dictation equipment.

About Trio Systems LLC

Founded in 1978, Trio Systems is a leading provider of web development tools and software development components for the PC software industry. The company's product offerings include audio recording, streaming software and embedded database software components for use in small businesses, local governments, education and retail channels. Trio Systems is a privately held company.
